- 1) Delete the .(root) zone from DNS2 and configure conditional forwarding on DNS2
- 2) Configure JenerB as an Active Directory Integrated zone, and convert JenerB to an Active Directory ~~to~~ integrated zone
- 3) Set dynamic updates to Secure only
- 4) Enable kind secondaries
- 5) Configure conditional forwarding on the dns.com DNS server for stormwind.com
- 6) Enable DNS debug logging
- 7) Delete the secondary zone on DNS2. Convert both DNS servers to use Active Directory integrated zones
- 8) In the zone properties, enable Zone Aging and Scavenging
- 9) Run `dnscmd /zoneexport`
- 10) Title zones
- 11) The client has been manually configured with a different set of DNS servers

12) Incorrectly defined default gateway

13) Incorrectly defined DNS server

14) ipconfig /registerdns

15) You should run the ping command

17) Enable BIND secondaries

18) Configure secure only on the zone transfer tab for both servers

19) In the server properties, enable zone aging and scavenging

20) run dnscmd /zonefile

16) The issue is with the DNS servers.
